

Dear Troels,

After a year of studying of your inspiring web site and several month of building I glad to let you know that I built an AT 3WC. And I glad to have them in my leaving room. The sound is natural and pleasant! All work I did my self: starting from cutting panels to veneering. I couldn't find HDF thicker as 5mm so I glued required thickness panels using 5mm HDF sheets... It took a loong time and a lot of PVA glue but I like result! I used best I can afford components in the crossovers and I follow your building instructions strictly.

Veneering is another long and tricky process specially for me without any carpenter skills. But I enjoyed a work and result.

I thank you very much for your grate contribution in to the DIY audio society and I wish you a lot of insipience in the future!

Best regards,

Sergey, Ukraine
