

Building pics SEAS 5inch with CA15RLY - by Mats/Sweden

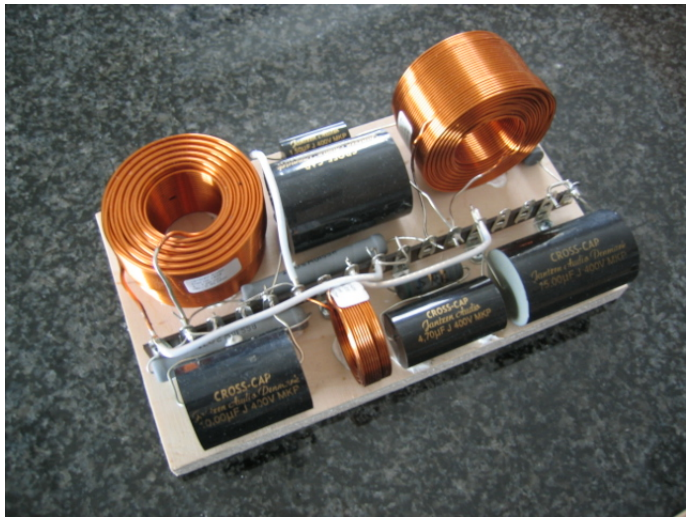

I am using pre-veneered mdf . The veneer is the not very common zebrano. I have earlier built a pair of loudspeakers (Zahra) with raw veneer that I have glued to the mdf myself. But after using pre-veneered mdf, my experience is that it's really time saving and the final result will be better.

Using tape for fixation when gluing the cabinet together.

All wood work.

The internal cable is of silver plated copper (from Elfa). Blind nuts for the screws to the elements.

The final result! The position of the bas ports differ from Troels drawings. I have moved them to the front because this loudspeaker will be hanged rather close to the wall.

This pair of loudspeakers exceeds my expectations regarding the sound they deliver. Very much value for the money!

Thank you Troels for your advice and for sharing of your loudspeaker designs.

Best regards
Mats
